Start
Load suite; build ToolEnv with fault policy and seed
Take next variant
Take next task
Copy task with trial t and seed in metadata
Time agent.run(task); tool calls meet seeded faults
agent raised?
yes
Record failed run with an error step
no
Score answer; compute metrics; classify failures
Append RunResult (task, trial)
more trials?
yes
no
more tasks?
yes
no
more variants?
yes
no
Build EvalReports; rank by success, cost, latency
End: ExperimentReport
